

Yong-Jick LEE

President, Center for Accessible ICT, Korea

Dr. Yong Jick Lee is a president and an ICT accessibility researcher at Korea Center for Accessible ICT, a research center that concerns information and communication technology accessibility for persons with disabilities, persons with age-related disabilities and those with specific needs. The research center is conducting research on assistive technologies for persons with disabilities, and developing tools used in rehabilitation treatment areas including occupational therapy and speech therapy. Dr. Lee is also participating in developing ICT accessibility international and domestic standards through ITU-T, W3C, ASTAP(Asia-Pacific), and TTA(Korea). He played role as an editor in developing ITU-T Recommendations including Y.4204 Accessibility requirements for Internet of Things applications and services, and Y.4211 Accessibility requirements for smart public transport. He also participated in researching status of mobile accessibility in Asia-Pacific regions through APT ASTAP. Prior to joining Korea Center for Accessible ICT, he worked as a professor in Jungwon University and JEI University in Business Administration majoring Information Systems. He's current research interest includes accessibility services in disaster management services, accessible IoT and smart cities, accessible mobile applications, etc.
